

# The ODS Connections Brief

Outcome Driven Solutions | ServiceNow Source-to-Pay Experts

If your organization has ServiceNow, Source-to-Pay is your smartest next step. It does not replace the modules you already have — it completes them. Each connection below shows what becomes possible when S2P is in place.

## How S2P Completes the Platform

### HAM/SAM/ CDM/EAM

Asset Management tracks what you own. S2P tracks what it costs, its cost center, budget impact, outyear costs - enforcing pricing at purchase and validating invoices against contract terms.

### ITSM / CSM

Service Management tracks requests & demands. S2P tracks approved suppliers, availability, the financial impacts, and keeps users updated every step of the way.

### SPM

SPM tracks approved budgets. S2P tracks commits and actuals — informing budget compliance and impact at the moment of purchase.

### HRSD

HRSD tracks roles and headcount. S2P aligns catalogs to job function and ensures provisioning stays within policy.

### Governance, Risk & Compliance (GRC)

GRC tracks supplier risk. S2P restricts purchases from flagged suppliers and surfaces risk signals before a mistake is committed.

### Contract Management Pro (CMP)

CMP tracks contract terms and obligations. S2P enforces contract pricing, validates invoices, and triggers SLA credits automatically.

**ServiceNow optimizes workflows, reduces overhead, and accelerates business.**

**ServiceNow Source-to-Pay takes it to a new level while enhancing financial outcomes.**

Each connected module gives S2P more context to work with. The more of the platform you have in place, the more ROI S2P can find, protect, and continuously improve.

## Why Outcome Driven Solutions

With 25+ years of Source-to-Pay expertise, ODS is the only ServiceNow partner focused exclusively on Source-to-Pay — which makes us uniquely qualified to know where S2P value lives, why it leaks, and how to reclaim it.

Our experience spans Healthcare, Government, Manufacturing, Higher Education, Retail, and more. Across every industry, the modules above tell part of the story. S2P makes the financial picture complete.
